

Robotoo Dental Innovation

Robotoo Dental Innovation (ROBOTOO®) is an Israeli medical device manufacturer developing a disruptive platform in the field of dental restoration, leveraging the latest robotic technologies already developed by various industry leaders and leading academies.

ROBOTOO's preparation device is developed as a top quality, state-of-the-art dental robot, enabling best-in-class preparation of patient teeth based on a 3D plan, executed to unprecedented precision.

The merits of this robotic technology enable a proprietary patent-pending dental platform that provides shorter, less painful and less expensive restoration procedures as the gold standard of dental restoration.

The significant benefits to patients increases restorations demand and propels growth in dental clinics. The ROBOTOO® closed system model requires that the robotic device at the clinic be uploaded with 3D preparation models designed remotely and exclusively by ROBOTOO® modeling centers. Those models match the dental prosthetics (e.g. laminates, crowns and bridges) which are also fabricated in ROBOTOO's world-class manufacturing facilities.

ROBOTOO's team includes medical device veterans, serial entrepreneurs and robotic technology experts with in-depth knowledge of the medical device industry and accredited specialty in cosmetic dentistry.

The global cosmetic dentistry market will be worth \$22.3 Billion by 2020 and is expected to grow at a CAGR of 6.8% during the forecasted period. Growth in this market is attributed to rising middle-class disposable income, growing consumer awareness about cosmetic dentistry, rising focus on dental aesthetics and growing baby boomer population with significant spending power.

The traditional non-robotic supply of dental esthetic services, especially in emerging markets, is lagging behind the growing demand. According to the latest statistics conducted in mainland China, there were only 0.95 dentists per 10,000 population on average in 2015.

Implementing a Lean R&D method, ROBOTOO® will start selling during year 2020.

ROBOTOO® is raising US\$2m in capital for 20% stake in its outstanding shares at pre-money valuation of \$10M.

Taking into account the operational model, comparable market valuations, the uncontested market space and the universe of potential strategic acquirers, ROBOTOO® believes it can exit within 4 years at valuation of \$250-500m.
